

Emmanuel Adoga

Business Systems Analyst | ERP Functional Specialist

306-807-7122 · emmanuel.adoga91@gmail.com

Open to remote and hybrid opportunities across Canada

PROFESSIONAL SUMMARY

Business Systems Analyst and ERP Functional Specialist with 7+ years of experience configuring and optimizing Microsoft Dynamics NAV (Navision) and D365 Business Central across distribution, logistics, and professional services environments. Hands-on expertise in ERP module configuration — Sales & Receivables, Purchase & Payables, Inventory & Warehouse Management — including posting group setup, item card and tracking configuration, approval workflows, and UOM governance. Complements functional ERP depth with a full business analysis capability: structured discovery, BRD/FRD authorship, BPMN process mapping, UAT leadership, and cross-functional stakeholder alignment. Certified in IIBA CBAP and ServiceNow Business Process consulting, with a track record of translating operational process gaps into precise system configurations and reporting solutions that reduce cycle times, improve data accuracy, and deliver measurable business outcomes. Equally effective in Agile sprint delivery and structured Waterfall engagements.

CORE COMPETENCIES

ERP Configuration (NAV / D365 BC)	Sales & Purchase Module Setup	Inventory & Warehouse Management
Posting Groups & G/L Alignment	Item Tracking & UOM Governance	Order-to-Cash Process Optimization
Requirements Engineering (BRD/FRD)	BPMN Process Mapping	Gap Analysis & Root Cause Analysis
Power BI Reporting & KPI Design	UAT Design & Defect Management	Agile / Scrum / Waterfall Delivery
Stakeholder Facilitation & JAD Sessions	Change Management & User Adoption	ServiceNow ITSM Process Design

WORK EXPERIENCE

Business Systems Analyst | JL13 Concepts Inc | Canada

Nov 2024 – Present

Project 1: Digital Transformation Readiness Assessment and IT Strategy Roadmap: Engaged to support a mid-size professional services client undergoing digital transformation. Conducted a full current-state assessment across four business units, identified nine process inefficiencies, and delivered a prioritized IT strategy roadmap that reduced the client's projected transformation timeline by four months.

Project 2: Customer Intelligence and Analytics Platform Requirements and Reporting Framework: Led requirements definition for a data and analytics platform consolidating customer behaviour, sales performance, and support data for a retail client operating across three provinces. Delivered a Power BI reporting framework built on 15 defined KPIs and unified data source mappings, replacing five separate weekly Excel reports with real-time visibility.

Project 3: ERP Order-to-Cash Optimization and Inventory Accuracy Enhancement (Microsoft Dynamics NAV18): Engaged by a distribution client to diagnose and remediate end-to-end Order-to-Cash workflow failures across order entry, inventory allocation, and shipment processing in NAV18. Identified three systemic gaps — missing shipment notification triggers, a manual re-entry loop between the CRM and NAV, and inventory variances driven by UOM mismatches at receiving — and delivered six targeted NAV configuration changes that reduced order cycle time by 35% and improved on-time fulfilment from 78% to 94%. Investigated recurring inventory variances, defined 11 business rules, and delivered a Power BI dashboard that reduced stock variance by 25% and cut regulatory reporting turnaround by 40%.

Project 4: D365 Business Central — Sales, Purchase & Inventory/Warehouse Configuration: Engaged to configure Microsoft Dynamics 365 Business Central for a distribution client transitioning from a legacy operations system. Led end-to-end setup of the Sales & Receivables, Purchase & Payables, and Inventory modules — configuring customer and vendor posting groups,

payment terms, document approval workflows, item cards, item tracking codes, and warehouse bin structure. Delivered a fully configured environment with end-user training documentation and post-go-live validation across all configured modules.

Roles/Responsibilities

- Facilitated structured discovery workshops and elicitation sessions with business unit leads, IT managers, C-suite stakeholders, and operational staff across all four client engagements, using a pre-built facilitation guide to capture current-state pain points, strategic objectives, and technical constraints before scoping any solution.
- Produced As-Is and To-Be BPMN process maps in Visio and authored gap analysis reports documenting nine inefficiencies across onboarding, reporting, and communication workflows, translating findings into a prioritized IT strategy roadmap aligned to the client's budget and delivery capacity.
- Authored Business Requirements Documents and Functional Requirements Documents covering user stories, acceptance criteria, data flow diagrams, and business rules across all engagements, ensuring full traceability from stakeholder need to delivered feature.
- Worked with JL13's analytics team in two-week Agile sprints to define 15 customer and operational KPIs, mapped data sources from the client's CRM, POS, and support ticketing systems, and validated all KPI logic against sample data before sign-off.
- Built Power BI dashboard requirements and collaborated with developers through iterative review cycles, validating report outputs against business definitions and retesting after each defect fix until UAT sign-off was achieved across all reporting modules.
- Conducted vendor and tooling evaluations using a weighted scoring matrix across five platform options, presenting a recommendation with risk, cost, and implementation considerations to the client's executive team.
- Delivered change impact assessments, stakeholder communication plans, and training documentation to support client adoption, then ran post-launch check-ins over 45 days to identify and resolve outstanding adoption gaps.
- Maintained a formal requirements traceability matrix in SharePoint and Confluence linking each business requirement to its corresponding user story, test case, and delivered feature to support audit readiness and scope control.
- Interviewed 14 stakeholders including the Operations Manager, Warehouse Supervisor, Sales Manager, and NAV18 System Administrator to map current-state Order-to-Cash workflows and identify inefficiencies impacting fulfilment performance and inventory accuracy.
- Configured six targeted changes directly within NAV18: corrected item card UOM conversion tables to enforce consistent unit handling across purchase orders and receiving; applied a PO-level UOM lock and a receiving validation rule that blocked posting when the received unit differed from the purchase order line; configured shipment notification workflow alerts to the sales team at goods dispatch; aligned inventory and G/L posting groups to ensure accurate financial postings; and defined the field mapping specification for the CRM-to-NAV integration to eliminate the manual re-entry loop between systems.
- Pulled and reconciled six months of NAV18 transaction data in Excel to perform root-cause analysis on fulfilment delays, stock discrepancies, and UOM mismatches, translating findings into precisely scoped configuration changes rather than process workarounds.
- Built a Power BI dashboard pulling live inventory and order data from NAV18, giving the client's operations and procurement teams real-time stock visibility without manual ERP navigation, replacing the weekly Excel reporting cycle.
- Configured D365 Business Central Sales & Receivables module: set up customer posting groups aligned to the chart of accounts, defined payment terms and discount structures, and built document approval workflows for sales orders and credit memos.
- Configured D365 Business Central Purchase & Payables module: established vendor posting groups and payment terms, set up purchase order approval workflows, and defined vendor invoice matching rules to support three-way matching at the client's accounts payable team.
- Set up the Inventory module in D365 BC: built item cards with item tracking codes for serial and lot number traceability, defined unit of measure conversions per item, configured two warehouse locations with bin structures, and set costing methods (FIFO for finished goods, Average for consumables) with post-configuration validation of inventory valuation reports.
- Delivered configuration workbooks, end-user training guides, and test scripts covering the Sales, Purchase, and Inventory modules; ran UAT sessions with warehouse and finance staff to validate all configured workflows before go-live sign-off.

Project 1: Event Technology Setup & On-Site Support: Provided end-to-end technical support for three community events including the Spring Leadership Workshop (April 2024), Youth Empowerment Conference (November 2024), and Summer Youth Leadership Summit (July 2025). Set up AV equipment, presentation systems, and registration check-in processes for each event, troubleshooting on-site issues in real time to ensure smooth delivery for attendees, speakers, and volunteers.

Project 2: Website & Digital Communications Support: Supported maintenance and content updates for the organization's custom PHP website covering event registration, mentor applications, donation processing, gallery, and blog. Coordinated with the admin team to resolve form submission issues, update event listings, and ensure the site remained functional ahead of program intake cycles and fundraising campaigns.

Roles/Responsibilities

- Configured and tested AV equipment, laptops, projectors, and microphone systems ahead of each event, conducting pre-event walkthroughs to identify and resolve setup issues before attendees arrived.
- Managed on-site technical support during events, troubleshooting connectivity, presentation, and check-in issues in real time to minimize disruption to program delivery.
- Supported updates to the organization's website including event listings, registration forms, gallery uploads, and blog posts, coordinating with program staff to ensure content was accurate and published on schedule.
- Diagnosed and resolved website issues affecting event registration and mentor application submissions, escalating to the web developer where backend fixes were required.
- Set up and maintained Google Workspace accounts for staff and volunteers, managing access permissions and shared drives to support day-to-day program coordination.
- Created simple IT reference guides for staff covering common tasks including updating website content, managing event registrations, and troubleshooting Google Meet sessions used for virtual mentorship meetings.

Business Systems Analyst | Heels & Tech | Nigeria

Jan 2022 – Sep 2023

Project 1: Digital Student Onboarding Platform (Childcare & Early Education Client): Replaced a fully paper-based onboarding process handling 200+ applications per cycle with a digital platform, mapping 18 manual steps down to 7 through automation, built Figma wireframes for the applicant portal and admin dashboard, and delivered a solution that reduced processing time by 70% in the first intake cycle.

Project 2: AI Chatbot Integration for Fashion E-Commerce Platform: Created requirements for a customer service chatbot on a fashion website with 15,000+ monthly visitors. Analyzed three months of support tickets, identified 12 high-frequency query types driving 70% of volume, and defined chatbot scope and conversational flows. After launch, the bot resolved 68% of those queries autonomously and reduced the support team's workload by 30%.

Roles/Responsibilities

- Ran five structured elicitation sessions with admin staff, educators, and the operations director to gather and analyze business requirements before scoping a single feature, producing a BRD with 18 user stories, a data flow diagram, and As-Is and To-Be process maps in Visio.
- Analyzed three months of customer support ticket logs to identify the 12 query types driving 70% of chatbot scope and documented the conversational flows as a decision tree reviewed and signed off by the product owner before development started.
- Collaborated with product owners, developers, and UX designers in two-week Agile sprints to refine user stories, acceptance criteria, and technical specifications across both projects.
- Designed Figma wireframes for the applicant portal, admin dashboard, and chatbot conversation flows, then ran usability walkthroughs with end users before each handoff to the development team.
- Conducted gap analysis between existing manual workflows and proposed system capabilities, identifying seven automation opportunities that removed 11 manual steps from the onboarding process.
- Defined validation rules, business logic, and data integrity controls to ensure system accuracy, compliance, and scalability across both platforms.

Business Analyst | L&T OY | Finland (Contract)

Jan 2021 – Dec 2021

Project 1: Cleaning Operations Management System: Analyzed an underperforming cleaning operations system across multiple facility sites in Helsinki and Vantaa, documenting eight process gaps across team scheduling, consumables tracking, and quality inspections, and defined functional specifications for system enhancements covering automated scheduling, reorder triggers, and digital inspection checklists.

Project 2: Cleaning Service Performance Dashboard: Worked with the operations director and site managers to define 12 service KPIs covering schedule adherence, inspection pass rate, consumables consumption, and SLA compliance, then built a Power BI dashboard that replaced manual weekly Excel reports with real-time visibility across all sites.

Roles/Responsibilities

- Ran discovery workshops with site supervisors and cleaning team leads across Helsinki and Vantaa to understand where the existing system was failing, then produced a BRD, use case diagrams, and As-Is and To-Be process maps in Visio, documenting eight process gaps.
- Defined functional specifications for system enhancements covering automated team scheduling, consumables reorder triggers, and digital inspection checklists, translating operational pain points into prioritized development requirements.
- Acted as the day-to-day liaison between the operations team and the development team, managing the backlog in Confluence, maintained a formal change log to control scope, and ran weekly alignment calls to keep delivery on track.
- Worked with the operations director and five site managers to define 12 cleaning service KPIs and mapped data sources from the operations system, wrote Power BI dashboard requirements and validated all KPI calculations against live data during UAT.
- Led UAT with six site supervisors, tracked 24 defects to closure, and delivered a user guide to operations staff at rollout. The dashboard replaced manual weekly status reports site managers had been compiling individually in Excel.

Quality Assurance Analyst | Aritek Consulting | Finland

Apr 2019 – Dec 2020

Project 1: Mobile Payments Platform, Functional and Regression Testing: Built end-to-end test strategies for a mobile payments and digital wallet platform covering user onboarding, wallet funding, peer-to-peer transfers, transaction history, and payment processing. 340+ test cases mapped to a traceability matrix. Automated 80 high-priority regression scenarios in Robot Framework, reducing a 3-day manual cycle to under 6 hours.

Project 2: Retail E-Commerce Platform, UAT and Performance Testing: Led UAT for a mid-market e-commerce platform relaunch across merchandising, finance, and customer service, validating three payment gateway integrations and PCI-DSS compliance requirements. Caught a critical guest checkout defect on mobile that SIT had missed, confirmed fixed and retested within one sprint.

Roles/Responsibilities

- Analyzed business and functional requirements to develop comprehensive test strategies, test plans, and traceability matrices, ensuring full requirement coverage across functional, regression, UAT, and end-to-end testing cycles.
- Designed and implemented automated test frameworks using Robot Framework, which increased test coverage while reducing manual regression effort and cutting cycle time from 3 days to under 6 hours.
- Applied Boundary Value Analysis and Equivalence Class Partitioning to design test data sets, reducing redundant test cases by 30% while maintaining full coverage.
- Collaborated with developers and product teams in two-week Agile sprints and tracked 140+ defects in Jira from discovery through resolution, contributing to a sprint cycle reduction from 4 weeks to 2.5 weeks.
- Executed manual and automated testing across multiple application modules, documented test results, validated fixes, and ensured system stability before production release.

Junior Environmental Compliance & Data Analyst | Eurofins | Finland

Sep 2018 – Mar 2019

Project 1: Environmental Data Quality & Regulatory Compliance Reporting: Collected and analyzed environmental monitoring data for regulatory submissions, identifying recurring data quality issues across three reporting streams and developed a remediation process adopted as the team standard.

Project 2: Data Governance & Laboratory QA Support: Worked with the lab team to develop standardized data handling and governance procedures covering sample intake, data entry, and quality control checkpoints, reducing the inconsistencies flagged in audit reviews.

Roles/Responsibilities

- Collected and analyzed environmental monitoring data across multiple sample streams for regulatory compliance submissions to Finnish environmental authorities.
- Identified recurring data quality issues across three reporting streams affecting audit readiness, documented a remediation process that was reviewed by the team lead and adopted as the team standard.

- Developed standardized data handling and governance procedures covering sample intake, data entry, and quality control checkpoints in collaboration with the lab team.
- Supported validation and quality assurance of laboratory research data, reviewing outputs against expected parameters and flagging anomalies before data was included in compliance reports.
- Contributed to preparing both technical and non-technical regulatory reports submitted to Finnish environmental authorities.

Freelance Software Tester (Part-time) | uTest | Finland

Mar 2018 – Aug 2020

Project 1: Cross-Platform Functional & Exploratory Testing (Banking & E-Commerce): Ran exploratory, functional, and usability testing on 20+ applications across banking, entertainment, and e-commerce alongside full-time roles, submitting 90+ accepted bug reports covering functional failures, API issues, and usability defects.

Project 2: Web Debugging & Quality Reviews: Used Charles Proxy and Fiddler to monitor HTTP traffic and identify backend API issues not surfaced by functional testing. Findings were documented with HTTP logs and screenshots to give developers precise reproduction steps.

Roles/Responsibilities

- Performed exploratory, functional, and usability testing across 20+ applications in banking, entertainment, and e-commerce, submitting 90+ accepted bug reports with clear reproduction steps, environment details, and severity ratings.
- Monitored HTTP traffic and performed web debugging using Charles Proxy and Fiddler, identifying backend API errors, broken redirects, and session handling issues that UI-level testing would not catch.
- Gave detailed software quality reviews on multiple application releases covering usability, accessibility, and functional completeness. Feedback was used by product teams to prioritize pre-release fixes.

TECHNICAL SKILLS & TOOLS

ERP Systems: Microsoft Dynamics NAV (Navision 2013–NAV18) — Order-to-Cash configuration, UOM governance, posting group setup, receiving validation rules, workflow triggers | D365 Business Central — Sales & Receivables, Purchase & Payables, Inventory & Warehouse Management module configuration; customer/vendor posting groups, item cards & tracking, bin setup, costing methods (FIFO/Average), document approval workflows | SAP (familiar)

ITSM & Process Tools: ServiceNow (Business Process Consultant certified — ITSM process design, incident & change management workflow fundamentals, service catalog structure)

Methodologies: Agile (Scrum, Kanban), Waterfall, Iterative SDLC, SAFe (familiar)

Process Modeling: BPMN, UML, Visio, Bizagi Modeler, Lucidchart, Enterprise Architect

Requirements & Project Mgmt: Jira, Azure DevOps, Confluence, SharePoint, Trello

Prototyping & Design: Figma, Balsamiq, Miro, Canva

Data & Analysis: SQL (intermediate), Advanced Excel (pivot tables, VLOOKUP, Power Query), SWOT Analysis

Data Visualization: Power BI, Tableau

Testing: UAT, Regression, Functional, SIT, Robot Framework

Documentation: BRD, FRD, User Stories, RTM, Process Maps, Gap Analysis, Impact Assessments

Communication: Microsoft Teams, Slack, Outlook, Zoom

CERTIFICATIONS AND TRAINING

- Certified Business Analysis Professional (CBAP) — IIBA
- Business Process Consultant — ServiceNow University (ITSM process design, service catalog, incident & change management workflow fundamentals)
- Business Analysis Fundamentals
- Quality Assurance Fundamentals

EDUCATION

M.Sc. Aquatic Science | University of Jyväskylä, Finland

B.Sc. Geography | University of Ibadan, Nigeria
