PROFESSIONAL SUMMARY – IT BUSINESS ANALYST

A CBAP-certified IT Business Analyst with 7+ years of experience leading requirements management, business process re-engineering, and full requirements traceability across ERP, CRM, and enterprise systems engagements. Skilled at building strong working relationships with project sponsors, technical staff, vendors, and end users, then translating business need into validated requirements through interviews, workflow analysis, and document review. Experienced carrying those requirements through solution research, design, vendor evaluation, configuration, and testing, and maintaining full traceability from initial elicitation through to implementation so the chosen solution demonstrably meets the original business need. Comfortable managing multiple concurrent priorities and deadlines with a consistent stakeholder-service focus.

KEY SKILLS / CORE COMPETENCE

- Requirements Elicitation & Documentation (BRD, FRD, User Stories, Use Cases)
- Requirements Traceability Management (RTM, Impact Assessments)
- Business Process Re-Engineering (As-Is/To-Be, BPMN, Gap Analysis)
- Business Analysis Methodology (BABOK, CBAP)
- Stakeholder & Vendor Relationship Management
- Technology Solution Research & Recommendation
- UAT Planning, Testing & Coordination
- Vendor Product Demonstration Support
- Workshop & Training Facilitation
- Data Integrity, Recordkeeping & Documentation

WORK EXPERIENCE

Business Process Analyst (Contract) | Red Deer Polytechnic, Applied Research | Alberta, Canada Oct 2026 – Present

Project 1: Student Recruitment Process Mapping & Improvement: Leading the end-to-end mapping and improvement of the Student Recruitment process (Co-op, student research assistant, and related hiring), using a Lean Six Sigma (DMAIC) approach starting from the Define phase, with the improved process targeted ahead of the January summer-student hiring cycle.

Project 2: Reporting Standardization & Tracking System: Building a standard project and budget reporting tracking system from a reference template, starting with data cleanup of the Applied Research data collection sheet that feeds downstream reports, and defining a repeatable report structure: entry-only data tabs, one summary tab per objective (measure, goal, actual, progress), a definitions tab, and an issues log.

Roles/Responsibilities

- Facilitated an in-person process mapping session and followed up with one-on-one interviews with hiring managers and supervisors to capture the current-state process and pain points.
- Partner with the operations manager, grant management, and research staff to define reporting requirements, agree on report definitions, and standardize the Board Ends and grant reporting.
- Developing reporting SOPs and a reporting timeline with a clear definition of done, and scoping Power BI dashboards as a later enhancement.

Business Systems Analyst | JL13 Concepts Inc | Canada Nov 2024 – Present

Project 1: IT Strategy Roadmap & Solution Research: Conducted a full current-state assessment across four business units for a professional-services client, building relationships with sponsors and staff to identify business needs and constraints, researching options against the client's existing IT landscape, and delivering a prioritized, fiscally-minded IT strategy roadmap.

Project 2: ERP Requirements Traceability & Inventory Accuracy: Elicited and documented complex Order-to-Cash requirements from 14 stakeholders, maintaining full traceability from initial findings through six configuration changes in Microsoft Dynamics 365 Business Central and validation testing; on-time fulfilment improved from 78% to 94% and order cycle time fell 35%. Traced a recurring inventory variance to root cause, authored 11 new business rules, and validated the fix against post-implementation data, cutting stock variance 25%.

Project 3: Customer Intelligence & Analytics Platform Requirements: Partnered with an analytics team through two-week Agile sprints to define and document 15 KPIs, mapped data sources across CRM, POS, and support systems, and wrote validated Power BI reporting requirements that replaced five manual weekly reports with one governed reporting framework.

Roles/Responsibilities

- Serve as the primary business analysis liaison across concurrent client engagements, building strong working relationships with project sponsors, technical staff, vendors, and end users to keep requirements aligned to business goals throughout each engagement.
- Maintain full requirements traceability from elicitation through solution design, testing, and implementation, using a requirements traceability matrix to confirm every delivered change maps back to its originating business need.
- Research and recommend technology solutions that fit each client's existing IT landscape and budget constraints.
- Document requirements as BRDs, user stories, and use cases, and produce As-Is/To-Be process maps (BPMN) in Visio.
- Coordinate user acceptance testing, document results, and deliver training and change-impact documentation to support adoption after go-live.

IT Technical Support (Volunteer) | Power of Early Vision Foundation | Canada Feb 2024 – Present

Roles/Responsibilities

- Gather informal business requirements from program staff, translating them into configuration and process changes for donor- and participant-facing systems.
- Diagnosed and resolved website and system issues, coordinating with a developer on backend fixes and responding directly to user inquiries.
- Created IT reference guides and job aids, and set up and maintained access permissions and shared drives to support data integrity and consistent recordkeeping across the organization.

Business Systems Analyst | Heels and Tech | Nigeria Jan 2021 – Sep 2023

Project 1: Digital Student Onboarding Platform: Replaced a fully paper-based onboarding process handling 200+ applications per cycle with a digital platform, mapping 18 manual steps down to 7 and reducing processing time by 70% in the first intake cycle.

Project 2: AI Chatbot Integration for a Fashion E-Commerce Platform: Analyzed three months of support tickets to identify 12 high-frequency query types and defined requirements for a customer service chatbot that resolved 68% of those queries autonomously and cut support workload by 30%.

Roles/Responsibilities

- Ran structured elicitation sessions with admin staff, educators, and the operations director, producing a BRD with 18 user stories and As-Is/To-Be BPMN process maps with full requirements traceability through to Figma wireframes.

- Conducted gap analysis between manual workflows and proposed system capabilities, identifying seven automation opportunities that removed 11 manual steps from the onboarding process.
- Acted as day-to-day liaison between the product owner, development team, and end-user departments, flagging scope questions early to keep requirements and build in sync.

Quality Assurance Analyst | Aritek Consulting | Finland Apr 2019 – Dec 2020

Built end-to-end test strategies for a mobile payments platform and led UAT for a retail e-commerce platform relaunch, catching a critical checkout defect that system integration testing had missed.

Roles/Responsibilities

- Analyzed business and functional requirements to develop test plans and traceability matrices across functional, regression, and UAT cycles.
- Automated 80 high-priority regression scenarios, cutting a 3-day manual testing cycle to under 6 hours.

SELECTED SELF-DIRECTED PROJECTS

Independent practice projects built outside client and employer work, using synthetic or self-sourced data; not paid client or employer engagements.

CRM Data Cleanup, Standardization & Onboarding Import (HubSpot)

- Cleaned and standardized a 98-contact, 47-company, 44-deal CRM export in Excel, mapped every field to HubSpot's default schema, and extended the standard sales pipeline with a new “Negotiation” stage where the default schema didn't reflect real deal states, then reorganized the pipeline into Board view for at-a-glance status.

Inventory Cycle Count Reconciler (Infor VISUAL)

- Scoped a real process gap in scanner-less inventory cycle counting, then shipped, with Claude as an AI build partner, a browser-based tool that reconciles physical counts against an ERP on-hand export, automatically flags and clusters discrepancies by likely root cause, and includes a “blind count” control to protect count integrity.

TECHNICAL SKILLS & TOOLS

Business Analysis Tools & Methods: BPMN, UML, BRD, FRD, Use Case Diagrams, Requirements Traceability Matrix, Gap Analysis, Root Cause Analysis, Business Rules Design, BABOK

Applications & Digital Services: Microsoft Dynamics 365 Business Central, Dynamics NAV, HubSpot CRM administration, SQL, Power BI

Productivity & Documentation: Microsoft Office (Word, Excel, PowerPoint, Visio), SharePoint, Confluence, Jira, Azure DevOps

Process & Delivery Frameworks: Agile (Scrum), Waterfall, Lean Six Sigma (DMAIC), Change Management, KPI Definition, UAT & Regression Testing

AI Tools: Claude (AI build partner for requirements-to-delivery projects), Microsoft Copilot (requirements & documentation acceleration)

CERTIFICATIONS AND TRAINING

- Certified Business Analysis Professional (CBAP) – IIBA (BABOK-aligned)
- Business Process Consultant – ServiceNow University
- Business Analysis Fundamentals
- Quality Assurance Fundamentals

EDUCATION

M.Sc. Sustainable Management of Inland Aquatic Resources | University of Jyväskylä, *Finland*

B.Sc. Geography | University of Ibadan, *Nigeria*
